Your Comments:

It's important that the Willamette is cleaned up so that it can support wildlife and provide habitat for fish and other native species. It is also important that the responsible parties PAY for what has been done to the river. The contaminated sediment must be removed without stirring it up and sending pollutants down river. The clean up should be beyond what is required in Alternative G of the Feasibility Study.

We must limit the amount of Monitored Natural Recovery throughout the site.

We must have fish that are safe to consume, without raising cancer risk for people. Carcinogens are not something that Oregonians should have to "live with" because of the bad choices made by industry. We must use the best technology available for the cleanup process.

We must ensure that toxins and contaminants are disposed of safely. We must also ensure that polluters pay for their full share of the Cleanup.
